

WEBB ULTRA GRIP™

Webb OEM's Innovative Trailer TA225 ADB System

Same part number for left and right hand applications!

The new Webb OEM Trailer TA225 ADB System with its equal-length guide sleeves streamlines inventories and maintenance as it uses the same part number for both left-hand (LH) and right-hand (RH) applications.

Its variable lever ratio ensures top-notch braking efficiency, and the twin piston design ensures even pressure distribution on the inboard pad, leading to negligible radial or tangential taper pad wear.

Copper-free brake pads
reduce environmental impact

The wider pad with a smaller radial height results in a larger effective radius, contributing to a lighter disc and enhanced performance. A thicker pad lining retains a higher wearable pad volume over time, increasing longevity.

With a bigger effective radius and variable lever ratio, this caliper maximizes brake torque for given inputs, allowing for the use of a smaller brake chamber while maintaining equivalent performance.

WEBB AIR DISC BRAKE TA225 SYSTEM ADVANTAGES

Webb TA225 ADB System is an excellent choice for trailers

- Same part number for both left-hand (LH) and right-hand (RH) applications streamlines inventories and service
- Variable lever ratio ensures top-notch braking efficiency
- Twin piston design ensures even pressure distribution on the inboard pad, leading to negligible radial or tangential taper pad wear
- Fully sealed guide sleeves minimize caliper slide load for improved performance and longevity
- Copper-free brake pads for reduced environmental impact
- Wider brake pad with a smaller radial height results in a larger effective radius—contributing to a lighter disc and enhanced performance
- Thicker pad lining retains a higher wearable pad volume over time, increasing longevity
- With a bigger effective radius and variable lever ratio, the Webb TA225 maximizes brake torque for given inputs, allowing for the use of a smaller brake chamber while maintaining equivalent performance
- The combined weight of the caliper, rotor and hub sets a new benchmark in its class, offering a lightweight yet powerful solution
- Easy to install and service—replacing piston and guide sleeve boots is a breeze, requiring no special tools
- New easy-to-assemble guide sleeve end cap simplifies maintenance procedures

Webb OEM Trailer TA225 ADB System OPTIONS

- In-pad PWWI (Pad Wear Warning Indicator) compatible with existing PWWI kits
- Positive Pad Retraction (to minimize parasitic drag for enhanced fuel efficiency)
