

WEBB TRAILER DRUM

Engineered specifically for 20K trailer axles

Trailer brakes work better and last longer with the **NEW** lighter **COOLER** Webb 66764 brake drum

- **NEW** patented Webb CRT™ vents (Cool Running Technology) increase air-flow for superior heat transfer efficiency and cooler trailer wheel-end operating temperatures

- Innovative design manages heat 10% better than similar weight brake drums
- Cooler temperatures mean longer brake system life and lower maintenance costs
- Backed by a nationwide warranty and the best product support in the business
- Designed, cast, and machined in the USA

10 Cast Holes
11.25" B.C.
8.78" Pilot
16.5 x 7 Brakes
Weight: 99 lbs
Rating: 20,000 lbs GAWR

Trailer side skirts deflect airflow around wheel-ends causing higher brake temperatures

Trailer skirts improve aerodynamics, however over-the-road data acquired by Webb Engineering revealed they also reduce crosswind and straight line airflow below the trailer. This reduction in air flow resulted in a measured 41% increase in brake temperature. This added heat is torture for your brake system causing reduced braking performance and accelerated brake drum and lining wear.

New Webb 66764 is the solution!

Finite Element Analysis and "real world" data acquisition enabled Webb Engineers to optimize the 66764 brake drum specifically for 20K trailer applications. This advanced design includes Webb CRT vents to maximize airflow into the wheel-end allowing the drum to manage heat 10% better than similar weight products.

Made in the USA
