

SERVICE BULLETIN #149

4/17/2018

Webb 166R Drum Casting

The purpose of this service bulletin is to help customers determine the finished part number on Webb's popular 166R brake drum casting. Webb Wheel manufactures multiple finished brake drums from the 166R rough casting, therefore it is critical that the correct part number is verified before purchasing a replacement brake drum. The finished part number will begin with 651 and it will be followed by two additional numbers hand stamped into the drum casting. In the example below, the replacement part number is "65161". If you have any trouble identifying the finished part number on your brake drum, please contact our Engineering department via email at engineering@webbwheel.com or call 800-633-3256.
